We are moving away from Average Dwell

Every location attracts a mix of different visitor types, and a single average dwell time can mask that variety. To give a more accurate picture, we've introduced **three visitor audiences** into the dashboard:

- **Typical** — a representative sample of all visitors, closest to the previous flat average.
- **Engaged** — visitors moving across multiple streets and locations for a range of reasons.
- **Visitor** — the most engaged group, who dwell longest and interact most with the town.

This feature **will soon be live on the dashboard** and will **be applied retrospectively across historical data**, so you can compare consistently across all time periods.

Why we made this change

Our aim is always to give you the most realistic view of visitor behaviour. As with any data or analytics platform, the underlying models evolve over time as we gather more data and refine our methods — this is standard practice across the industry, not something unique to your account. As we continue to advance the models used, we have identified that a **three-tier breakdown** gives a much clearer and more truthful picture of how different visitors actually engage with your town.
